

# BRYANT®

## World Class Pin & Sleeve Devices With Worldwide Compatibility

### The New World Standard

Severe weather, extremes in temperature, wash downs, and cleaning agents are no match for Bryant. As part of the Bryant Industrial Products package, Pin & Sleeve devices are designed to meet universal IEC 309-1 and IEC 309-2 standards for safe, reliable use in the world's most demanding environments. From 2 pole, 3 wire to 4 pole, 5 wire configurations rated from 125V to 600V, Bryant offers singly-rated polarized receptacles, plugs, connectors, and inlets to safeguard productivity and personnel. Beyond these standards, Bryant Pin & Sleeve devices are approved to meet 1997 UL 1682 and 1686 requirements **today**.

European ratings are provided in:

- 16A, 32A, 63A, 125A

North American ratings include:

- 20A, 30A, 60A, 100A

### Superior Durability

Quality Bryant devices combine the latest advancements in materials and technology to deliver dependable service in an often

imperfect world. Dirt, dust, moisture, vibration, and impact cannot disrupt service or compromise user safety. Bryant Watertight and Splashproof devices offer the features you need for punishing conditions in the most hostile industrial environments.

### Mating As Easy As Clockwork

Bryant Pin & Sleeve products safeguard against mismatching devices of different amperage and voltage ratings by varying housing size, color, and the position of the female grounding contact. The female grounding contact is located at a specific clock position for each voltage rating relative to the housing keyway (always positioned at 6 o'clock). The corresponding male pin is located at its mirror position.

### Watertight Devices

Bryant's impact-resistant housings are made of insulated, non-conductive toughened nylon to guard against corrosion, chemical abrasion, and rugged handling. The cord grip features an internal "Swing-Away" clamp for strain relief and easy

wiring. Solid brass pins and contacts provide excellent conductivity, longevity, and contact reliability.

### Splashproof Devices

These devices provide a full measure of splashproof protection in the most popular international voltage and amperage ratings. They are VDE and CE approved with a moisture resistance rating of IP44.

### Accessories

Pin & Sleeve accessories include back boxes, adapter plates, and closure caps.

**World class performance...worldwide compatibility. Stop by to see the new standard of quality for yourself.**
